

Baker Hughes Filed Trip – 24.6.2016

The field trip to Baker Hughes on the 24th of June was held in conjunction with the Directional Drilling course taught by Dr. Oppelt. The Group of around 15 students left the ITE in the morning and drove to Baker Hughes' Celle location.

The company visit included a few presentations, one about the company and its history, both internationally and locally. The second presentation was given by an engineer regarding the current projects and analytical tools in development. The presentations were very informative and provided a solid idea of what Baker Hughes is doing in Celle. After the presentations the group was given a tour through the different workshops and assembly facilities on location. The facility specializes in tool assembly and development. The last stop of the tour was the EOR division on site and included a tour through new testing equipment for geothermal applications. Before, leaving Baker, lunch was provided and the group got to talk to an HR representative.

Following the visit to Baker Hughes the group went to the National Oil Museum in Wietze for a tour of their facilities. The guide was very good and clearly enjoyed giving the tours, overall a very interesting tour of the museum. After the tour the group got in the vans and headed back home to Clausthal after an informative and educating day.
