

GSSPE Summer Fest and an Excursion through OneSubsea Facilities – 26.8.2016

Every year Sommerfest brings the community of the German petroleum engineers together. Whether professionals or students, young or retired, they come together to share knowledge and a fun time. Many companies and universities partake in this event, which even small compared to others but not less important nonetheless.

This year was no different. Sommerfest 2016, took place in the headquarters of One subsea on the 26th of August. We were welcomed warmly once we arrived. Had a drink to quench our thirst and went on the company tour that showed us the different facilities. We were introduced to the different products that the company builds, from underwater connection facilities to the very control devices that are needed in order to make the whole underwater assembly work. As expected most, if not all products are made to withstand pressures of 3000m sea water depth. And could be more, depending on the requested rating from the costumers.

Afterwards, the president of the GSSPE, Oksana Zhebel welcomed us again and people started to mingle and get to know each other. This helps to build strong relations not only between young and experienced but between industry and academia as well. To conclude, a very generous dinner was prepared and was enjoyed by everybody. After that it was time to return home.

The SPE chapter of TU Clausthal would like to thank the GSSPE and One Subsea for inviting us and for making this possible. See you next year.
