

Student Technical Conference STC16, Wietze – 03.11.2016

On November 3rd and 4th 2016 the annual student technical conference took place in Wietze. The SPE student chapter from Clausthal attended the event with multiple presenters and participants in the poster contest as well as several delegates. The conference is a great opportunity for petroleum students from Europe and all over the world to meet and partake in each other's work. The presentations cover a wide range of topics important to the petroleum industry. In addition to the technical aspect the social aspect of the event is very important providing a basis for intercollegiate relations and discussions. The event was held at the Oil museum in Wietze and the days were spent listening to student presentations as well as announcements from the German SPE section. The keynote speaker was from the BVEG talking about the importance of oil and gas as well as geothermal for the future of Germany. Overall the event was very successful with many students attending and several great presentations.
